If a user already has an account, the user can directly click the "log in" button. Otherwise, a new user needs to click the "Register" button to create an account. In the "Register" page, an administrator is created if and only if the new user enters the correct "Admin Verify Code". After logging in or registering, the user can see the home page. The user needs to input "start order", "number of turns", "turn duration", "CDA scaling" and "rider attributes". Only admins can see the "Advanced Settings" button. After clicking the button, the admin can input rel airspeed and default values of constants. When all parameters have been entered, click the "Calculate" button and then you will get the output presented on the last page (that is total time and charts).
